Note: Sillen identified the strong potential interaction between Mg+2 and F-1 in seawater as described within his original seawater equilibrium model [61Sil_9000, p. 565]. This still remains a realistic possibility [G. Hefter, personal communication, 6/8/2015] despite the facts that Mg+2 and SO4-2 interaction is also strong and SO4-2 occurs at more than 2 orders of magnitude higher total concentration than F-1. However, such an outcome would have to be due significantly to other specific ion effects given that at I=0.7 in NaClO4 lgK(F-1) = 1.3 whereas lgK(SO4-2) = 0.8, only half an order of magnitude difference.

Data Assessment

Weight	Assessment
9	highest accuracy
8	multi-determined; excellent dependability
7	trustworthy; outstanding single determination
6	better than average reliability
5	average single determination
4	some doubt
3	poorly known
2	guess to achieve consistency (or just as bad)
1	no information but consistent
0	problematic/inconsistent
